

America Recycles Day 2008

WILL COUNTY joins with IKEA of Bolingbrook to offer "Green Options"

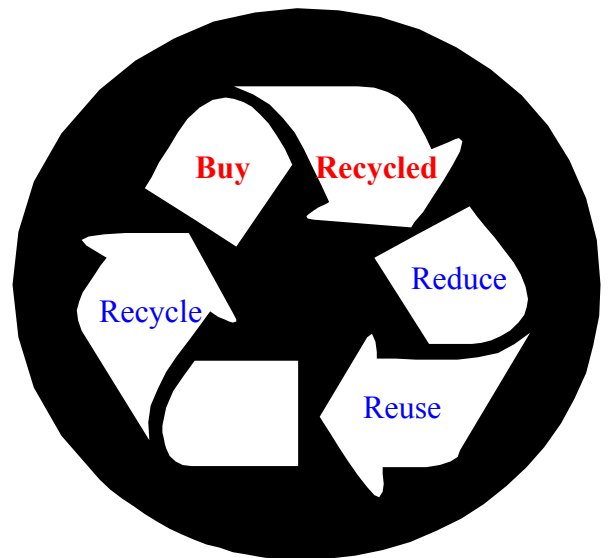

A brief presentation from the County's Recycling Program Specialist at the entrance of the IKEA store in Bolingbrook. Questions are encouraged!

For the third year in row, IKEA has agreed to feature products available in their stores every day that are made from Recycled Material. This is done to illustrate how easy it is to choose items made from the materials people recycle. The products are of equal quality and competitively priced compared to their non-recycled content counterparts.

It is by choosing products and packaging made with recycled content that consumers complete the recycling loop. Buying items made with recycled content reduces the amount of raw materials mined, transported and processed. Using recovered materials, saves energy, reduces greenhouse gases, and carbon dioxide. Learn more about "green" shopping choices.

Visit the store during normal store hours to see a list or display of products made from recycled materials.
